

Production plant in Germany successfully certified under the International Cyanide Management Code

- CyPlus shows its commitment to its precious metals mining customers
- The facility has been successfully certified for the sixth time

The CyPlus production facility in Wesseling, Germany, meets all the required safety standards set out in the “International Cyanide Management Code for the Manufacture, Transport, and Use of Cyanide in the Production of Gold” (ICMC). Once again, production obtained certification with “full compliance”, without a single objection. The facility has therefore been continuously successfully certified since 2006.

In addition to the certified productions in Germany and Mexico (CyPlus Idesa), CyPlus maintains various certified transport routes as well as terminals and warehouses to support our customers. These certifications show the high commitment of CyPlus to ensure safe and responsible handling of cyanides and to support our customers in precious metals mining. Training sessions on cyanide handling together with our customers, transport companies and authorities are an essential part of our engagement.

The ICMC – along with other certifications – is a vital factor in our cyanide business. It not only applies to production in Germany and Mexico, but also to the delivery routes for our gold and silver mining customers worldwide.

The ICMC is a voluntary, performance driven, certification program of best practices for gold and silver mining companies and the companies producing and transporting cyanide used in gold and silver mining. The Cyanide Code was developed by a multi-stakeholder Steering Committee under the guidance of the United Nations Environmental Program and the then-International Council on Metals and the Environment. CyPlus GmbH was among the first official signers of the code.

About CyPlus

CyPlus, as part of Röhm group, is a regional leader in cyanides that offers strong technology services and is aiming to position itself as an innovative solution provider. CyPlus is known for safe and responsible management of cyanides throughout their lifecycle, from production, transport and handling, to application and disposal. CyPlus' offers encompass services for the entire cyanide lifecycle. CyPlus devotes its capabilities to introducing new solutions that focus on boosting productivity and the potential to significantly innovate gold mineral processing. Employing more than 100 staff and running production sites in Europe and Mexico (the CyPlus Idesa joint venture) and sales offices worldwide allows us to ensure proximity to our customers and a reliable supply chain set-up.
